We have a holistic, full-stack approach, simply because there is no other way. If we want to reclaim the public nature of the internet and yield the full benefits from technology as a society, we need to have full coverage — period.</p> <p>Only though enough critical mass of shared building blocks and collective resources will our governments, businesses and civil society be able to count on digital security and long term operational availability. The same approach that empowers individuals to take full control of their digital lives, will also steer towards more fair, innovative economies and societies. So let's make it happen!</p>

Kratek opis predmeta razpisa:	<p>We want a more resilient, trustworthy and open internet. We want to empower end-users. Given the speed at which the 'twin transition' is taking place, we need a greener internet and more sustainable services sooner rather than later. Neither will happen at global scale without protocol evolution, which — as the case of three decades of IPv6 introduction demonstrates — is extremely challenging. NGIO Core is designed to push beyond the status quo and create a virtuous cycle of innovation through free and open source software, libre hardware and open standards. If we want everyone to use and benefit from the internet to its full potential without holding back, the internet must be built on strong and transparent technologies that allow for permissionless innovation and are equally accessible to all.</p> <p>We work towards better technologies to restore and maintain European sovereignty and to secure democratic ownership of the digital society. NGI Zero actively works towards digital commons and trustworthy technological building blocks for the next generation of the internet. The goal is to help set the course of the evolution of technology, provide people with concrete new tools and more reliable infrastructure, which provides better overall security and allow them more agency and choice.</p>	
Višina razpoložljivih sredstev:	This is why between now and 2026 we will award 8.8 million euro in small to medium-size R&D grants towards solutions that bring the next generation of the internet closer.	
Maksimalna višina sofinanciranja:	We are seeking project proposals between 5.000 and 50.000 euro's — with the possibility to scale them up if there is proven potential. Reliability, confidentiality, integrity, security, and resource efficiency should be the 'new normal' of the internet, something ordinary users should not have to worry about — users should be in control.	
Ciljne skupine oz. potencialni upravičenci:	Given equal proposals, inhabitants of the EU and countries associated to Horizon Europe are given priority.
